

Integrate Commvault with Microsoft Sentinel for advanced SIEM & SOAR capabilities

THE OPPORTUNITY

Faster, smarter responses with fewer gaps

Threats don't wait. Every second counts when identifying, analyzing, and responding to cyber threats. Manual processes slow you down, increase risk and leave gaps in your defense that attackers will exploit.

Microsoft Sentinel is a powerful SIEM and SOAR solution — but you can take it even further. Commvault's data connector feeds Sentinel with deeper insights, helping SecOps teams detect threats faster, automate playbooks, and recover clean data with confidence.

THE SOLUTION

Seamless integration for proactive security

Commvault and Microsoft have a smarter way to fight back. By integrating Commvault's intelligent data insights and automated response capabilities with Microsoft Sentinel, organizations gain real-time, automated cyber resilience that strengthens security and accelerates recovery.

Activate threat detection and response

Commvault sends insights to Sentinel, triggering playbooks to disable data aging, restrict access, and isolate threats.

Proactively scan backups for malware

Detect risks early to prevent spread —delivering clean recoveries free from hidden threats.

Streamline security workflows

Reduce manual effort by automating investigation and response actions through Microsoft Sentinel.

Lock down data access

Automatically rotate credentials via Azure Key Vault to minimize the attack surface and securing critical data.

Get started in minutes

Get up and running quickly with pre-built Sentinel connectors and playbooks from the Azure Marketplace.

WHY THIS WORKS

More visibility. More control. Less risk.

Backups aren't just for recovery — they're the key to a strong security strategy. With Commvault and Microsoft, you gain real-time threat detection, incident analysis, and orchestrated response actions.

Stay ahead of threats

Commvault's data insights enrich Sentinel's detection capabilities, helping security teams identify threats faster with greater accuracy.

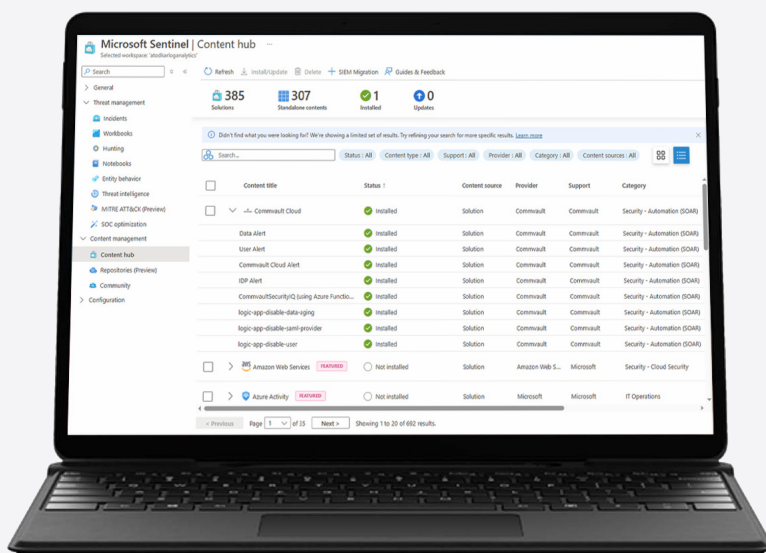

Smarter, automated responses

Incident analysis and response playbooks execute almost instantly, containing risks before they escalate.

Improved efficiency

Reduce manual work with automated threat detection, faster investigations, and seamless workflows across Microsoft Sentinel and Defender.

Commvault Cloud for Microsoft Sentinel

Ingest alerts and automate actions to respond faster. Commvault Cloud for Microsoft Sentinel brings your backup intelligence directly into your SIEM. It turns Commvault alerts into Sentinel incidents, triggers analytic rules, and enables automated responses like disabling users or locking down data — all inside the Microsoft environment your team already knows.

Installation is quick. Visit Azure Marketplace and explore the GitHub guide to get started.

No slow rollouts. No silos. Just smarter security from backup to response.

THE BOTTOM LINE

Prove your readiness

Resilience is everything. Commvault and Microsoft simplify the process. Take this opportunity to lead with confidence and make sure your organization is ready to face disruptions head-on.
